Work Offered

The IACS carries out work connected with applying computer science methods in dedicated industrial computer systems. The research in this area covers the following topics: industrial measurement and control systems, identifications and control of industrial objects, real-time computer systems and industrial computer networks. The student will be part of a team working on projects related to real time operating (real-time data processing). In many industrial branches, there is a need for use of real-time data processing systems, so a lot of measurements, identifications and control applications developed in the department are working in real-time restrictions. The goals of student's projects in this research area would be taking part in writing, data processing and visualisation software for QNX real-time operating system.
